

Geography

Local Biome

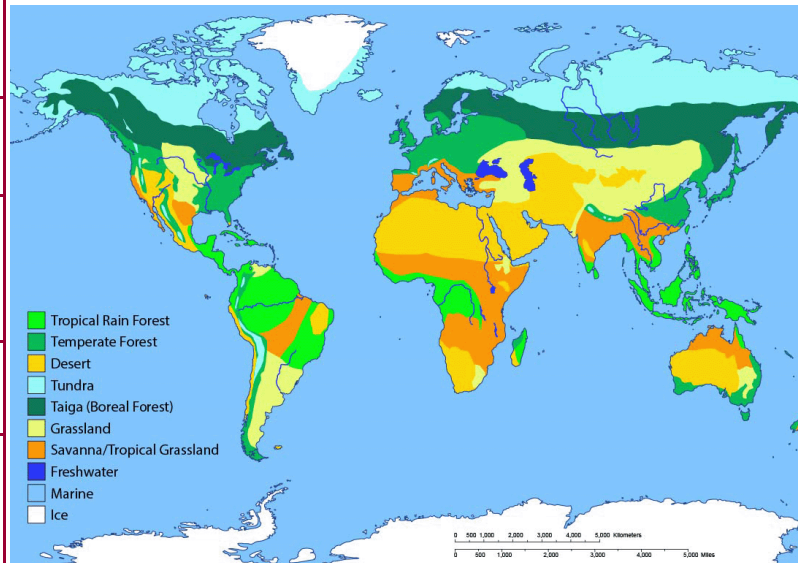

Year 5

Subject Specific Vocabulary

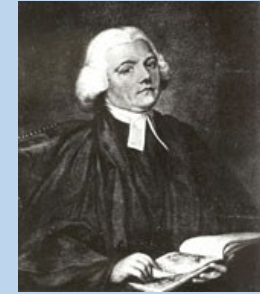

Biome	biomes are areas across the world which have a similar environment .
Ecosystem	a place where animals, plants, and other living things live and work together with the air, water, and land around them.
Climate	what the weather is usually like in a place over a long time.
Vegetation belt	an area where certain types of plants grow because of the weather and soil there.
Native	something or someone that comes from a place naturally.
Analyse	look at something carefully to understand it better by breaking things into pieces and asking questions to figure out what's really going on.

Skills

- I can understand that physical features are significant within the local area.
- I can name the biomes and ecosystems found in the UK.
- I can name some animals, plants and habitats that can be found in a woodland ecosystem.
- I can collect, record and analyse data.
- I can use compass points and six-figure grid references.

Key Figure/s

Gilbert White –
 “The First Ecologist”
 One of the first ecologists because he noticed how everything in a habitat connects.

Aspirations

Vet
 Wildlife rescuer/scientist
 Teacher
 Nature guide
 Scientist
 Gardner

Sticky Knowledge

- There are 8 points of a compass: North, North-East, East, South-East, South, South-West, West and North-West
- The UK has a temperate forest biome .
- An ecosystem is all living things in a given area interacting with each other and their non-living environments.
- In the UK, we live in a deciduous forest vegetation belt which means most trees and plants are deciduous, although some are evergreen trees.
