

Grid reference	Numbers used to find a location on a map.
Scale	Shows the relationship between distances on a map and real life.
Land use	The purpose of an area of land.
Infrastructure	The roads, railways and services people use.
Residential	An area where people live.
Commercial	An area used for businesses and shops.

1791 – The Ordnance Survey was founded.

1936 – Detailed Ordnance Survey maps became widely available.

Today – Digital mapping tools help us explore and understand places.

Year 6 Geography - BBC Bitesize

Maps can be used to locate and describe geographical features.

Four and six-figure grid references help us find precise locations.

Scale helps us measure real distances using a map.

Land can be used for different purposes, such as residential, commercial and industrial use.

Human activities can change places over time.

[illegible][illegible]

I can use four and six-figure grid references.

I can use map scales to measure distance.

I can identify different types of land use.

I can use compass directions to describe location.

I can compare historical and modern maps.
